

Active Directory

PowerShell Query Reference

ACEBUCHE.LOCAL

Author: Jose Antonio Acebuche | May 12, 2026

Prerequisites

All queries require the ActiveDirectory PowerShell module. Run on a Domain Controller or a machine with RSAT installed.

- Import-Module ActiveDirectory
- Domain: ACEBUCHE.LOCAL
- Requires read access to AD objects

1 | Organizational Units (OU Tree)

List All OUs

Purpose	Retrieve all Organizational Units in the domain
Command	<code>Get-ADOrganizationalUnit -Filter * Select DistinguishedName Sort-Object DistinguishedName</code>
Possible Output	DistinguishedName

	OU=Domain Controllers,DC=ACEBUCHE,DC=local
	OU=Finance,OU=Shadow,DC=ACEBUCHE,DC=local
	OU=HR,OU=Shadow,DC=ACEBUCHE,DC=local
	OU=IT,OU=Shadow,DC=ACEBUCHE,DC=local
	OU=Shadow,DC=ACEBUCHE,DC=local
	OU=Users,OU=Finance,OU=Shadow,DC=ACEBUCHE,DC=local
	OU=Users,OU=HR,OU=Shadow,DC=ACEBUCHE,DC=local
	OU=Users,OU=IT,OU=Shadow,DC=ACEBUCHE,DC=local

Full AD Object Tree

Purpose	List all AD objects (OUs, computers, users) sorted by DistinguishedName
----------------	---

Command	Get-ADObject -Filter * -SearchBase "DC=ACEBUCHE,DC=LOCAL" Select Name, ObjectClass, DistinguishedName Sort-Object DistinguishedName Format-Table -AutoSize		
Possible Output	Name	ObjectClass	DistinguishedName
	----	-----	-----
	ACEBUCHE	domainDNS	DC=ACEBUCHE,DC=local
	Domain Controllers	organizationalUnit	OU=Domain Controllers,DC=ACEBUCHE,DC=local
	WIN-SERVER Controllers,...	computer	CN=WIN-SERVER,OU=Domain Controllers,...
	Shadow	organizationalUnit	OU=Shadow,DC=ACEBUCHE,DC=local
	Finance	organizationalUnit	OU=Finance,OU=Shadow,DC=ACEBUCHE,DC=local
	Users	organizationalUnit	OU=Users,OU=Finance,OU=Shadow,...
	HR	organizationalUnit	OU=HR,OU=Shadow,DC=ACEBUCHE,DC=local
	IT	organizationalUnit	OU=IT,OU=Shadow,DC=ACEBUCHE,DC=local

Indented Tree View

Purpose	Show OUs indented by hierarchy depth
Command	\$OUs = Get-ADOrganizationalUnit -Filter * Sort DistinguishedName foreach (\$OU in \$OUs) { \$d = ([regex]::Matches(\$OU.DistinguishedName,'OU=')).Count \$i = ' ' * (\$d - 1) \$n = (\$OU.DistinguishedName -split ',')[0] -replace 'OU=','' Write-Host "\$i -- [OU] \$n" }
Possible Output	-- [OU] Domain Controllers
	-- [OU] Shadow
	-- [OU] Finance
	-- [OU] Users
	-- [OU] HR
	-- [OU] Users
	-- [OU] IT
	-- [OU] Users

Note: Depth is calculated by counting OU= occurrences in the DistinguishedName.

2 | Group Policy Objects (GPO)

List All GPOs

Purpose	Show all GPOs in the domain with status and timestamps			
Command	Get-GPO -All Select DisplayName, GpoStatus, CreationTime, ModificationTime			
Possible Output	DisplayName	GpoStatus	CreationTime	ModificationTime
	-----	-----	-----	-----
	Default Domain Policy	AllEnabled	1/1/2025 10:00:00	1/1/2025 10:00:00
	Default DC Policy	AllEnabled	1/1/2025 10:00:00	1/1/2025 10:00:00

GPO Links on Domain Root

Purpose	Show GPOs linked directly to the domain root	
Command	Get-GPInheritance -Target "DC=ACEBUCHE,DC=LOCAL" Select-Object -ExpandProperty GpoLinks	
Possible Output	DisplayName	: Default Domain Policy
	GpoId	: {31B2F340-016D-11D2-945F-00C04FB984F9}
	Enabled	: True
	Enforced	: False
	Target	: DC=ACEBUCHE,DC=local
	Order	: 1

GPO Links on Specific OU

Purpose	Show GPOs linked to a specific OU (e.g., Shadow)	
Command	Get-GPInheritance -Target "OU=Shadow,DC=ACEBUCHE,DC=LOCAL" Format-List	
Possible Output	Name	: Shadow
	ContainerType	: OU
	Path	: ou=Shadow,DC=ACEBUCHE,DC=local
	GpoInheritanceBlocked	: No
	GpoLinks	: {Default Domain Policy}

	InheritedGpoLinks	: {Default Domain Policy}
--	-------------------	---------------------------

Note: If no GPO is linked to the OU, GpoLinks will be empty but InheritedGpoLinks may still show inherited policies.

GPO Links — All OUs

Purpose	Loop through all OUs and show linked GPOs for each		
Command	<pre>\$OUs = Get-ADOrganizationalUnit -Filter * foreach (\$OU in \$OUs) { \$links = (Get-GPInheritance -Target \$OU.DistinguishedName).GpoLinks if (\$links) { Write-Host "`nOU: \$(\$OU.DistinguishedName)" \$links Select DisplayName, Enabled, Enforced Format- Table } }</pre>		
Possible Output	OU: OU=Shadow,DC=ACEBUCHE,DC=local		
	DisplayName	Enabled	Enforced
	-----	-----	-----
	Default Domain Policy	True	False

Note: Only OUs with directly linked GPOs will appear in the output.

3 | Users

List All Users

Purpose	Show all user accounts in the domain		
Command	Get-ADUser -Filter * Select Name, SamAccountName, Enabled		
Possible Output	Name	SamAccountName	Enabled
	----	-----	-----
	Administrator	Administrator	True
	Jose Antonio Acebuche	jacebuche	True
	Guest	Guest	False
	krbtgt	krbtgt	False

Users in a Specific OU

Purpose	List users inside a specific OU										
Command	Get-ADUser -Filter * -SearchBase "OU=Users,OU=IT,OU=Shadow,DC=ACEBUCHE,DC=LOCAL" Select Name, SamAccountName										
Possible Output	<table> <thead> <tr> <th>Name</th><th>SamAccountName</th></tr> </thead> <tbody> <tr> <td>----</td><td>-----</td></tr> <tr> <td>IT User 1</td><td>ituser1</td></tr> <tr> <td>IT User 2</td><td>ituser2</td></tr> <tr> <td colspan="2">(empty if no users are placed in the OU yet)</td></tr> </tbody> </table>	Name	SamAccountName	----	-----	IT User 1	ituser1	IT User 2	ituser2	(empty if no users are placed in the OU yet)	
Name	SamAccountName										
----	-----										
IT User 1	ituser1										
IT User 2	ituser2										
(empty if no users are placed in the OU yet)											

User Details

Purpose	Get full details of a specific user
Command	Get-ADUser -Identity "jacebuche" -Properties *
Possible Output	DistinguishedName : CN=Jose Antonio Acebuche,OU=Users,OU=IT,OU=Shadow,... DisplayName : Jose Antonio Acebuche EmailAddress : jacebuche@acebuche.local Enabled : True LastLogonDate : 5/12/2026 8:00:00 AM SamAccountName : jacebuche UserPrincipalName : jacebuche@ACEBUCHE.LOCAL

Disabled Users

Purpose	List all disabled user accounts								
Command	Get-ADUser -Filter {Enabled -eq \$false} Select Name, SamAccountName								
Possible Output	<table> <thead> <tr> <th>Name</th><th>SamAccountName</th></tr> </thead> <tbody> <tr> <td>----</td><td>-----</td></tr> <tr> <td>Guest</td><td>Guest</td></tr> <tr> <td>krbtgt</td><td>krbtgt</td></tr> </tbody> </table>	Name	SamAccountName	----	-----	Guest	Guest	krbtgt	krbtgt
Name	SamAccountName								
----	-----								
Guest	Guest								
krbtgt	krbtgt								

4 | Computers

List All Computers

Purpose	Show all computer accounts in the domain		
Command	Get-ADComputer -Filter * Select Name, OperatingSystem, Enabled		
Possible Output	Name	OperatingSystem	Enabled
	----	-----	-----
	WIN-SERVER	Windows Server 2025 Standard	True

Computers in a Specific OU

Purpose	List computers inside a specific OU		
Command	Get-ADComputer -Filter * -SearchBase "OU=Shadow,DC=ACEBUCHE,DC=LOCAL" Select Name, OperatingSystem		
Possible Output	Name	OperatingSystem	
	----	-----	
	(empty if no computers are placed in the OU yet)		

Computer Details

Purpose	Get full details of a specific computer		
Command	Get-ADComputer -Identity "WIN-SERVER" -Properties *		
Possible Output	DNSHostName	:	WIN-SERVER.ACEBUCHE.LOCAL
	Enabled	:	True
	IPv4Address	:	192.168.122.x
	LastLogonDate	:	5/12/2026 8:00:00 AM
	OperatingSystem	:	Windows Server 2025 Standard
	SamAccountName	:	WIN-SERVER\$

5 | Groups

List All Groups

Purpose	Show all groups in the domain		
Command	Get-ADGroup -Filter * Select Name, GroupCategory, GroupScope		
Possible Output	Name	GroupCategory	GroupScope
	----	-----	-----
	Administrators	Security	DomainLocal
	Domain Admins	Security	Global
	Domain Computers	Security	Global
	Domain Controllers	Security	Global
	Domain Users	Security	Global
	Group Policy Creator...	Security	Global

Members of a Group

Purpose	List members of a specific group	
Command	Get-ADGroupMember -Identity "Domain Admins" Select Name, ObjectClass	
Possible Output	Name	ObjectClass
	----	-----
	Administrator	user
	Jose Antonio Acebuche	user

Groups a User Belongs To

Purpose	Show all groups a specific user is a member of
Command	Get-ADPrincipalGroupMembership -Identity "jacebuche" Select Name
Possible Output	Name

	Domain Users
	Domain Admins
	Administrators
